
Telecommunication & Electronics

- Testing of communication system blocks within the region of short wave & medium wave can be done on spectrum analyser. The small scale electronic industries can demand the use of equipment for measurement.
- Programs of any ICs can be loaded using this Universal Programmer kit. Applicable for every small as well as large hardware development & testing. Rewritable facility is the main feature.
- Simulation & designing of various electrical systems and GUI development. Applicable to project development with different hardware compatibility
- Design & simulation of various antennas
- Circuit Designing, PCB Layout designing & simulation of electronic applications. All controller based simulations can also be done.
- Testing of FPGA & CPLD with Xilinx simulation. Applicable for advanced project development with more speed.
- Designing of simple as well as complex PCBs including two sided PCB.
