

**Department of Computer Science & Engineering
(Artificial Intelligence & Machine Learning)****INDUSTRIAL VISIT REPORT**

Department of CSE-AI ML
Gharda Institute of Technology
Visit to ISRO and KRSRAC, Bangalore
Visit Date: September 9-13, 2025
Report Submission Date: September 26, 2025

Introduction-

As part of the academic curriculum, an industrial visit was organized for the Third-Year (TE) and Fourth-Year (BE) students of the CSE-AI ML department to the Indian Space Research Organization (ISRO) and the Karnataka State Remote Sensing Applications Centre (KRSRAC) in Bangalore, Karnataka. The visit, accompanied by 3 faculty members and 1 guide from Eduventura, aimed to provide students with practical exposure to space research, satellite technology, and geospatial applications. ISRO, India's premier space agency, is renowned worldwide for its achievements in satellite launches and space missions, while KRSRAC functions as the state's nodal agency for applying remote sensing and GIS in governance and development. Together, these visits helped bridge the gap between theory and practice, offering valuable insights into how space technology and geospatial sciences contribute to solving real-world challenges.

Objectives of the Visit-

- To gain exposure to the functioning of ISRO and KRSRAC and understand their role in advancing space research and geospatial applications.
- To familiarize students with the applications of satellite technology, remote sensing, GIS mapping, and data analytics in real-world projects.
- To understand how organizations like ISRO contribute to national space missions and how KRSRAC applies space-based data for state-level development.

- To learn how geospatial and satellite technologies support natural resource management, urban planning, smart city projects, and disaster management.
- To inspire students from CSE (AI & ML) to explore opportunities in the fields of space technology, geospatial sciences, artificial intelligence, and data-driven research.

Visit to ISRO-

Date-September 11, 2025

Location-Bangalore,Karnataka

During our visit, we learned that ISRO (Indian Space Research Organisation) is India's premier space agency, established in 1969 under the Department of Space. ISRO is globally known for its cost-effective space missions such as Chandrayaan (Moon Mission), Mangalyaan (Mars Orbiter Mission), and its advanced satellite launch capabilities through PSLV and GSLV rockets. ISRO's vision is to harness space technology for national development while pursuing planetary exploration and scientific research.

Activities During the Visit – ISRO

- Orientation session on ISRO's history, achievements, and future missions.

- Explanation of satellite launch vehicles such as PSLV and GSLV.
- Overview of India's space applications in communication, navigation, weather forecasting, and disaster management.
- Visit to exhibition models of rockets, satellites, and payloads.
- Interaction with ISRO officials, who explained career opportunities and research contributions.

Experiences – ISRO

- We felt inspired by ISRO's achievements in space missions and national development.
- Seeing models of rockets and satellites gave us a sense of pride and excitement.
- Learning about satellite applications in everyday life made us realize the importance of space technology.
- The sessions motivated us to think about how AI and ML can contribute to future space research.
- Overall, the ISRO visit was a source of inspiration and national pride for all of us.

Visit to KRSRAC-**Date-**September 12, 2025**Location-**Bangalore,Karnataka

During the visit, we learned that KRSRAC was established in 1985 and works under the Government of Karnataka as the nodal agency for remote sensing and GIS. The centre has advanced laboratories where satellite data is processed into maps and reports that support government decision-making. We understood that KRSRAC plays a very important role in areas such as natural resource management, environmental monitoring, and infrastructure planning.

**Activities During the Visit-KRSRAC**

- Orientation session conducted by officials, explaining the vision, background, and functions of KRSRAC.
- Demonstration and explanation of how satellite images are received and processed into useful maps and reports for planning.
- Lecture on GIS applications, describing how different data layers are analyzed and used in real-world projects.
- Interaction session with experts, where students asked questions and clarified their doubts.
- Informative discussions that helped students understand the concepts and applications of remote sensing and GIS.

Experiences-KRSAC

- We gained a clear understanding of how KRSAC functions and contributes to state development.
- It was exciting to see real-time satellite data being processed into meaningful information.
- The GIS demonstration helped us connect theoretical knowledge with real-world applications.
- Interaction with experts boosted our confidence and clarified many doubts.
- Overall, the visit inspired us to explore geospatial technology further and appreciate its societal impact.

Sightseeing-

1)Adiyogi Statue Bangalore

2) High court Bangalore

3) Cubbon park

4) Vidhan Soudha Bangalore

5) Bangalore Aquarium at Cubbon Park

Conclusion-

Overall, our industrial visit to ISRO and KRSRAC was both memorable and enlightening. At ISRO, we were inspired by India's achievements in space research, satellite launches, and planetary exploration, which gave us pride and motivation to contribute to future technological advancements. At KRSRAC, we understood how space-based data and geospatial tools are applied in state-level development, urban planning, and disaster management. Together, these visits helped us connect our CSE (AI & ML) academic knowledge with practical applications in space technology and geospatial sciences, motivating us to explore new ideas for our projects, research, and careers.

Acknowledgement-

We sincerely thank our college management, Head of Department, and faculty members for organizing the industrial visit to ISRO and KRSRAC, Bangalore. We are grateful to the officials of both organizations for their valuable guidance and informative sessions, which enhanced our knowledge of space research and geospatial applications. We also thank Eduventura and our guide for their support in coordinating the visit successfully.
